

Det vind-venlige energisystem

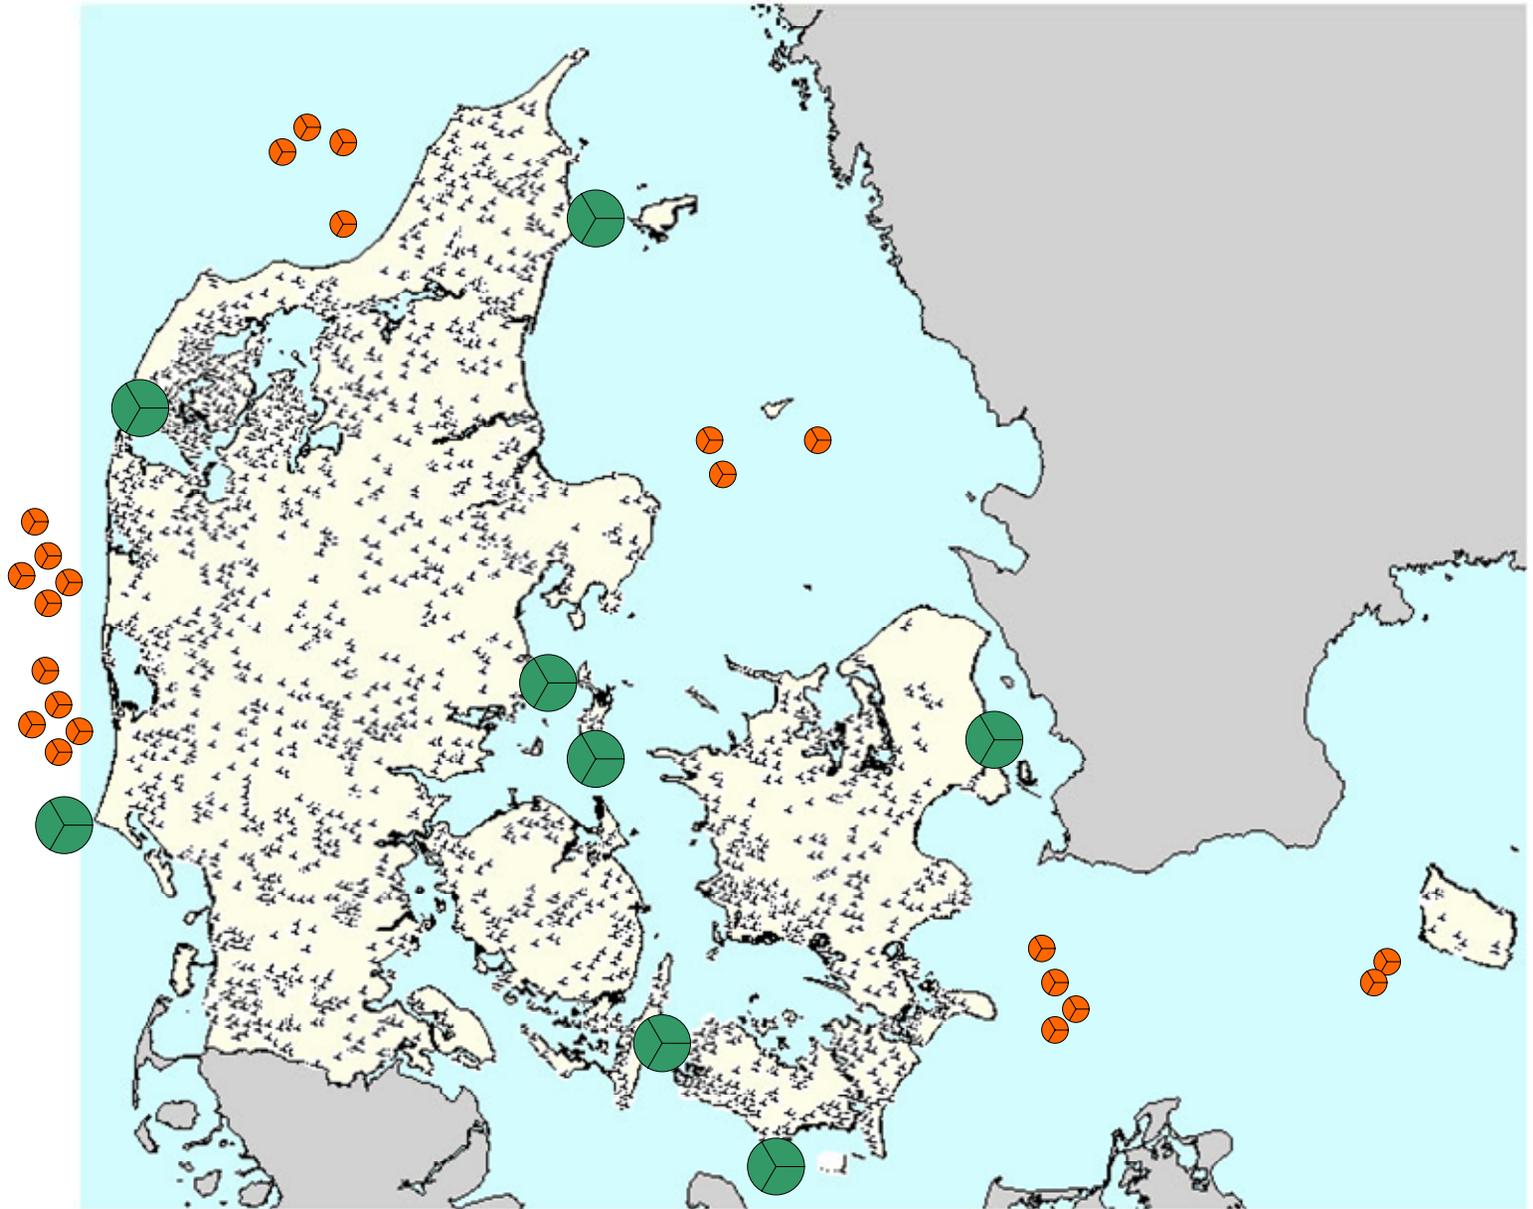

Morten Boje Blarke, Ph.D, Adjunkt, Aalborg Universitet

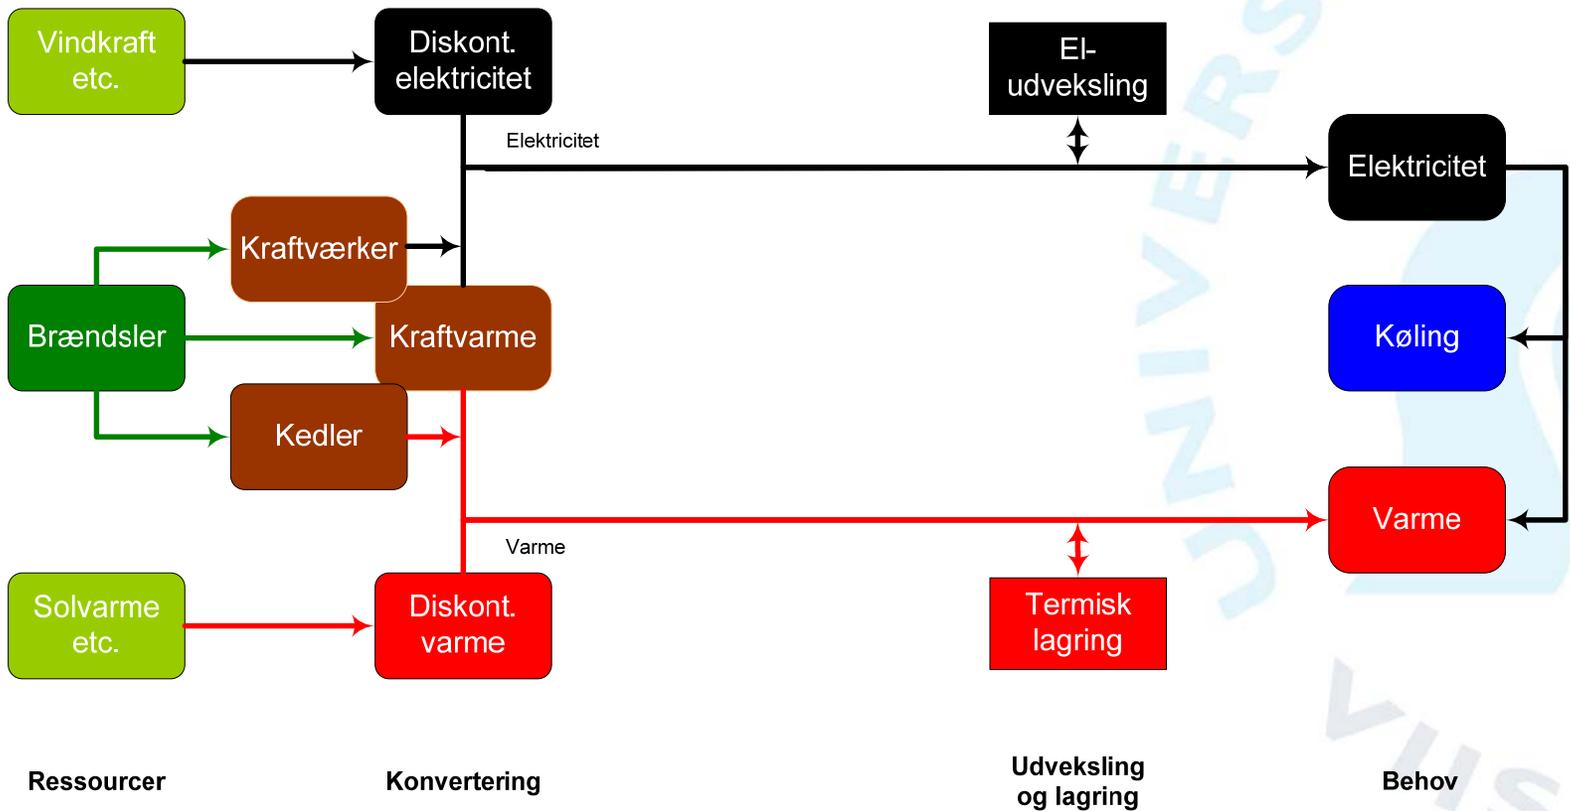

Det før-bæredygtige energisystem

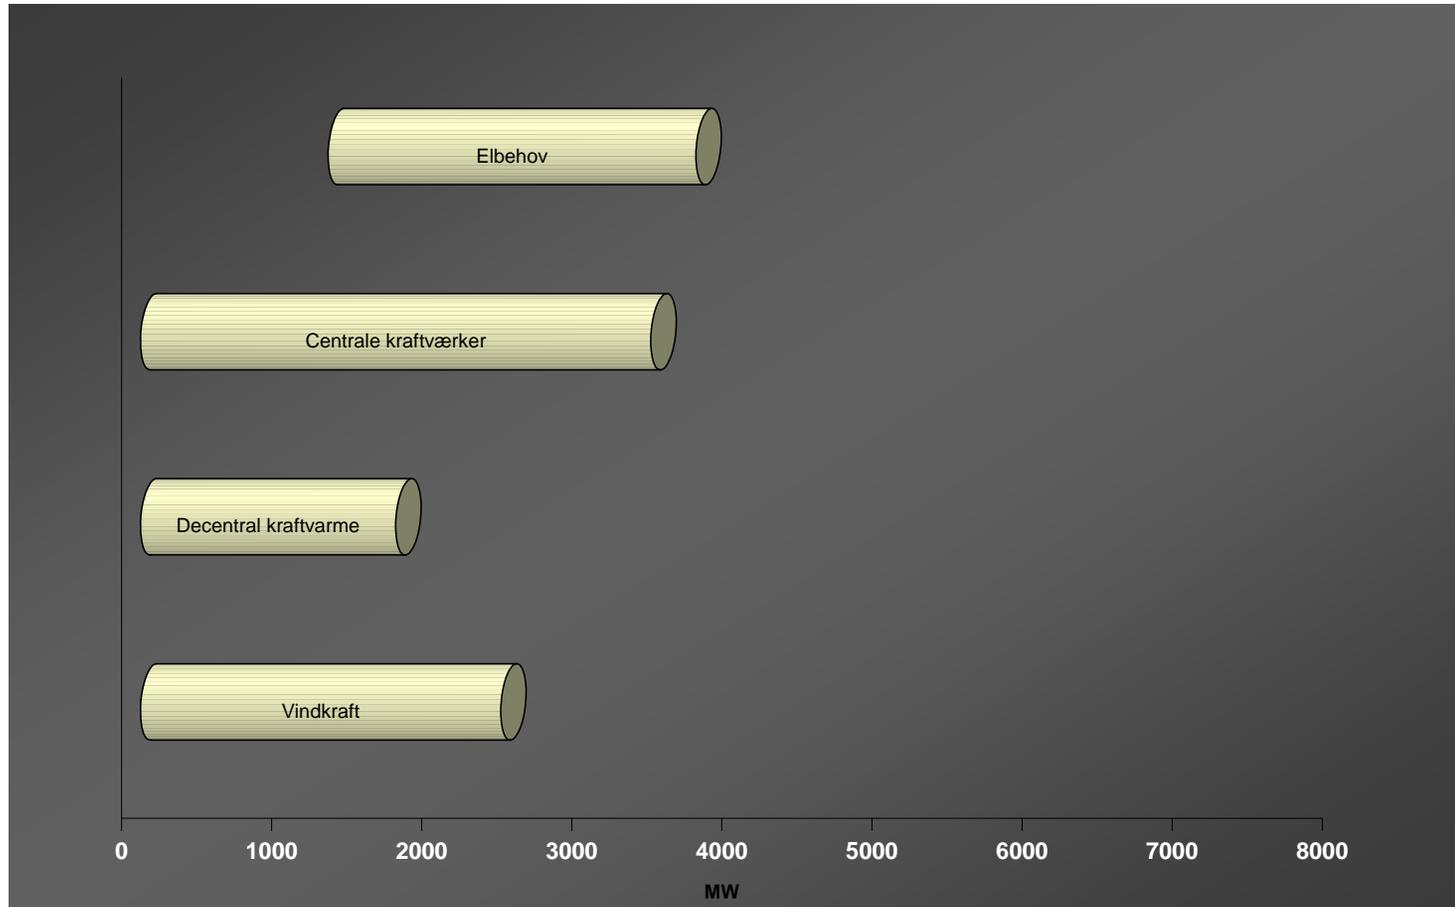

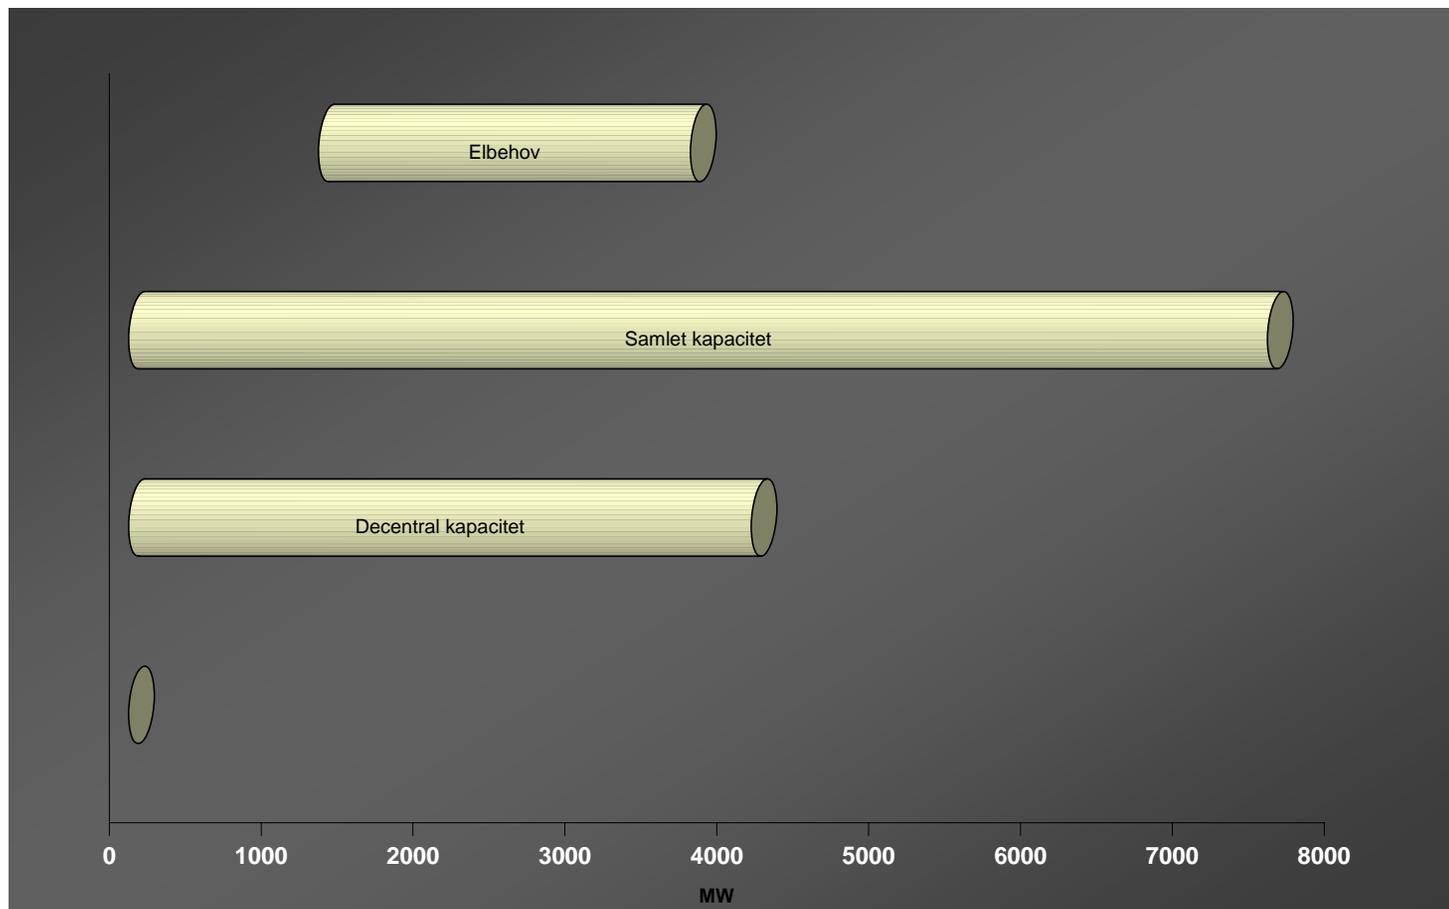

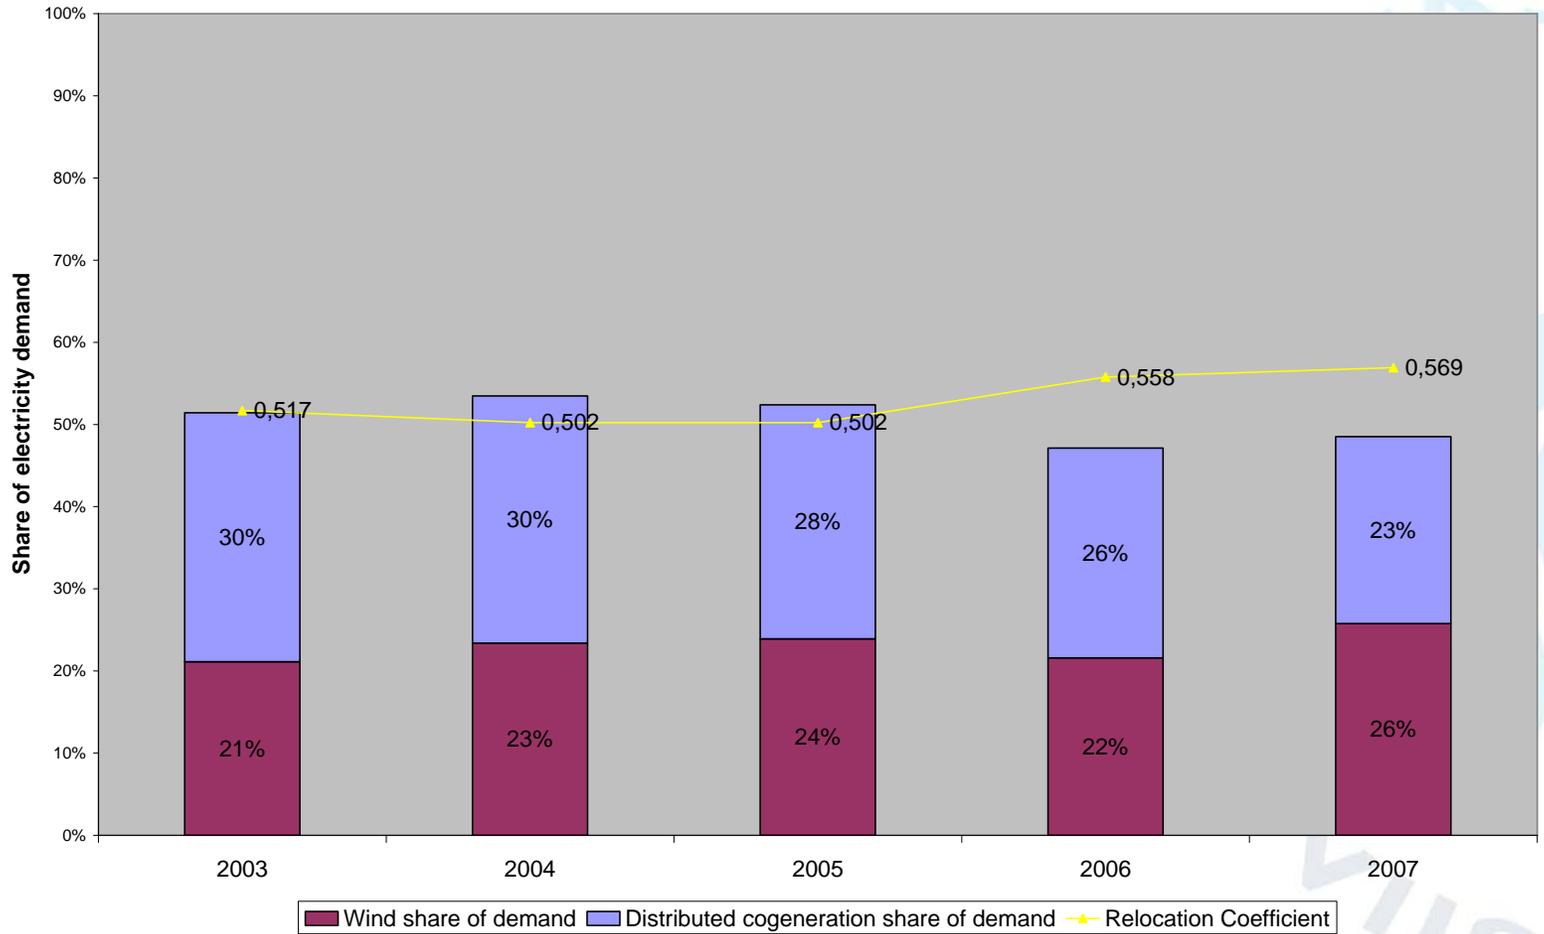

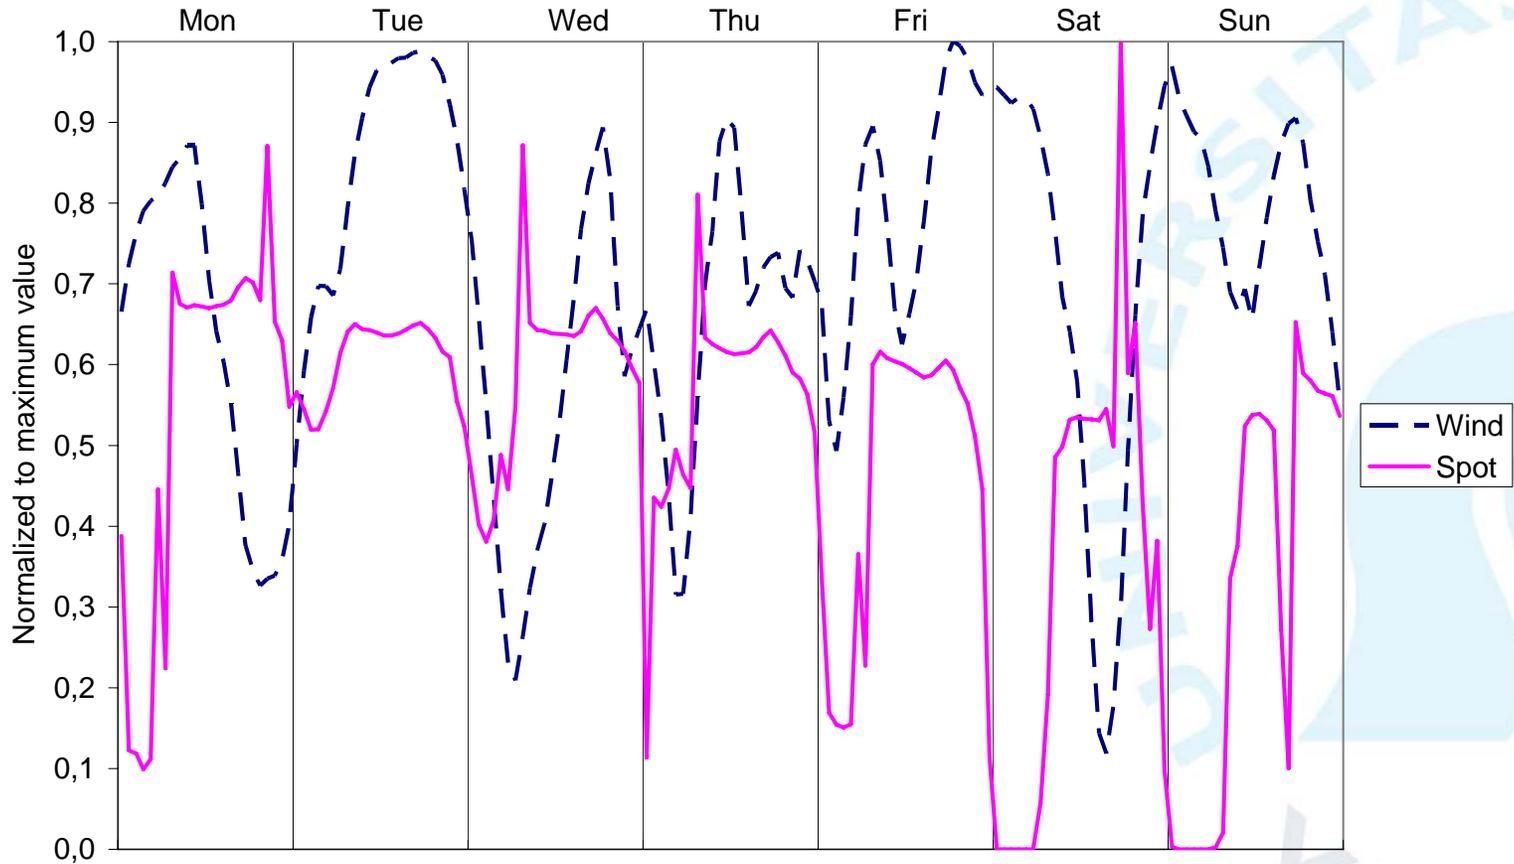

Week 2, 2007

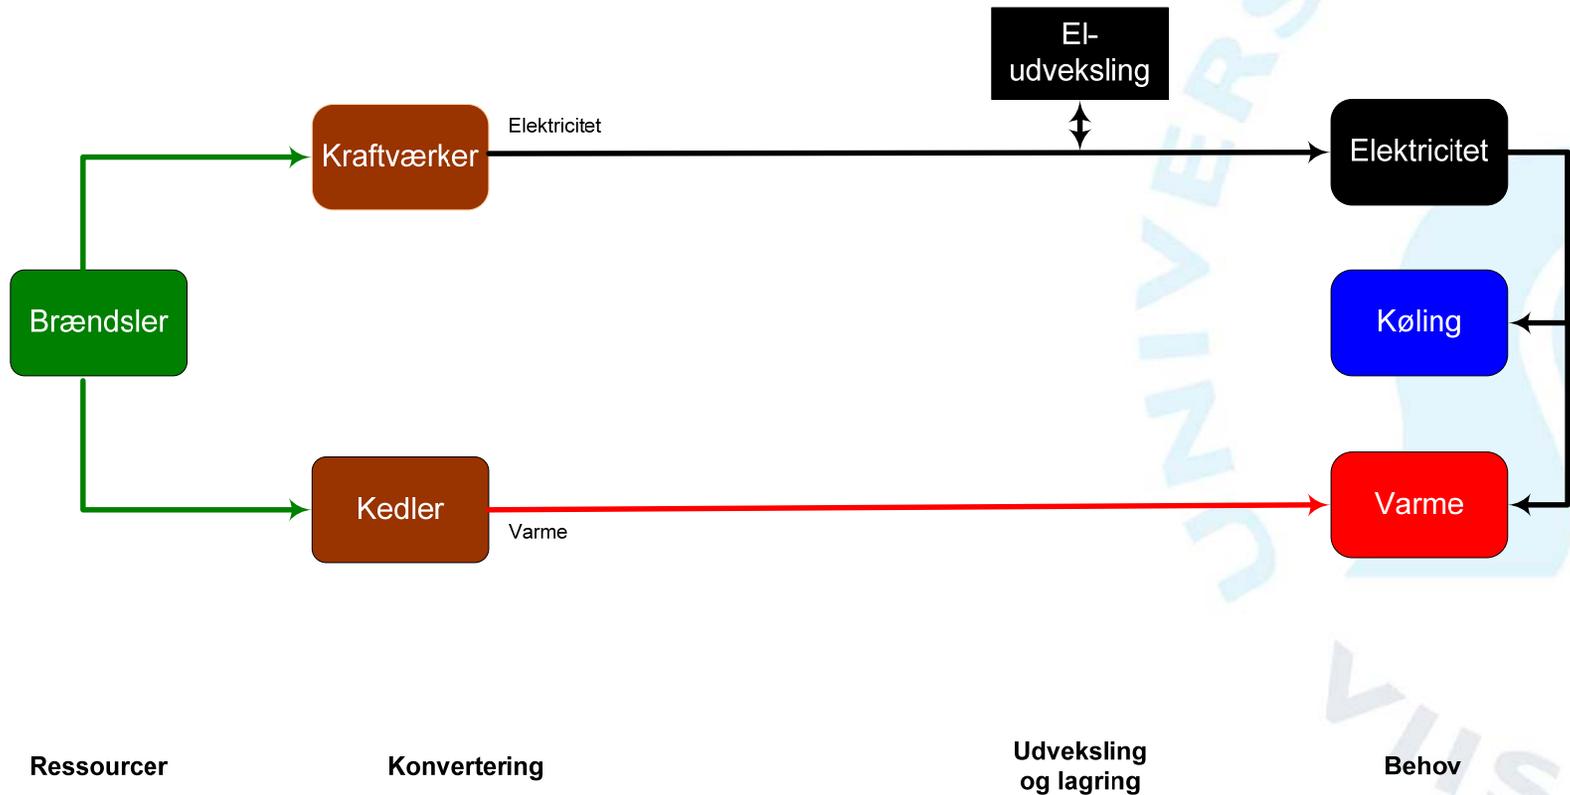

2006 Correlation Spot / Wind: -0,30

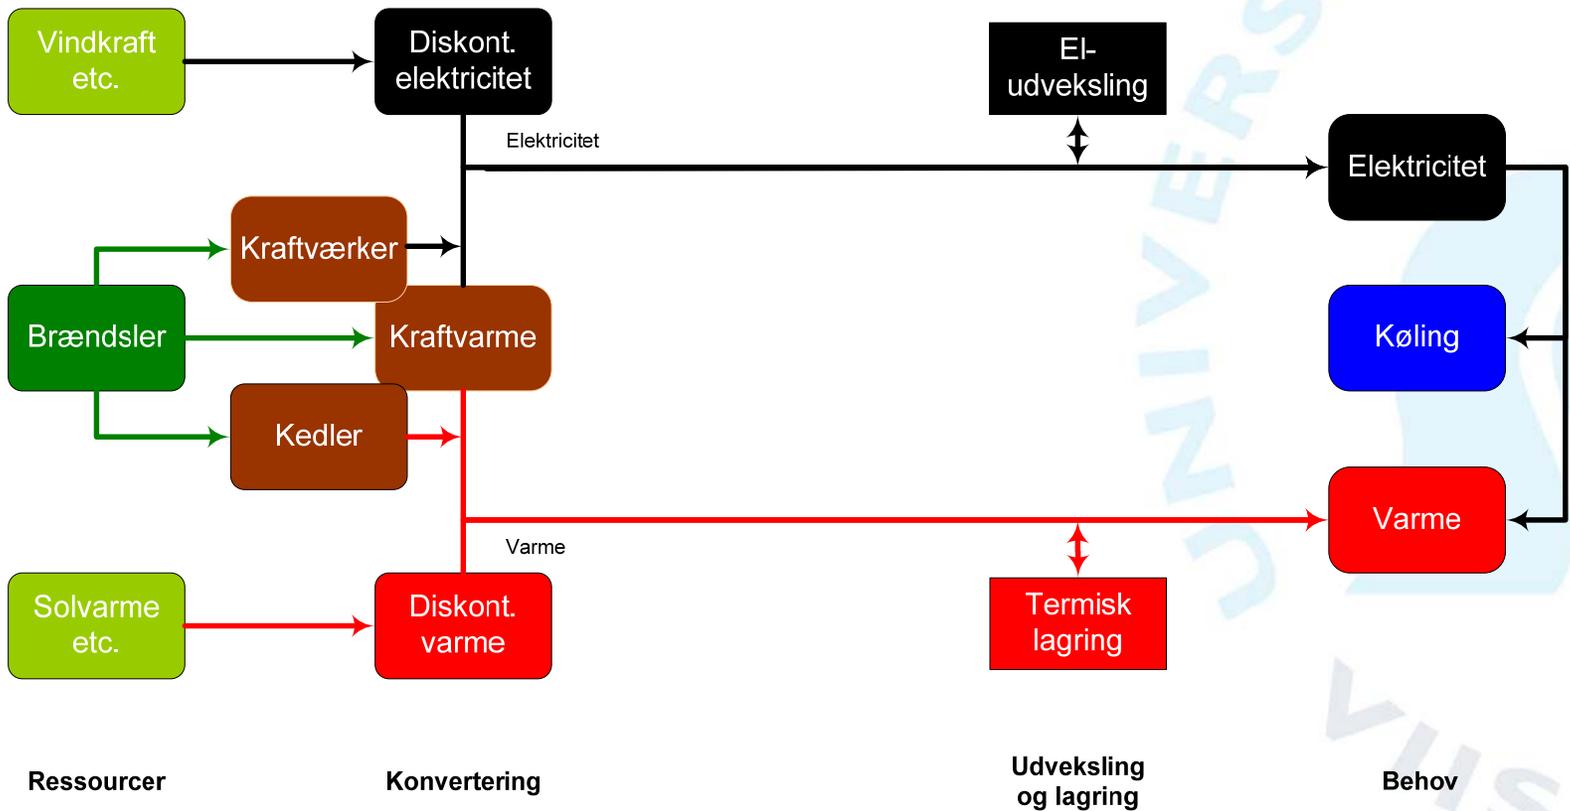

Et af det 21. århundredes vigtigste forskningsspørgsmål:

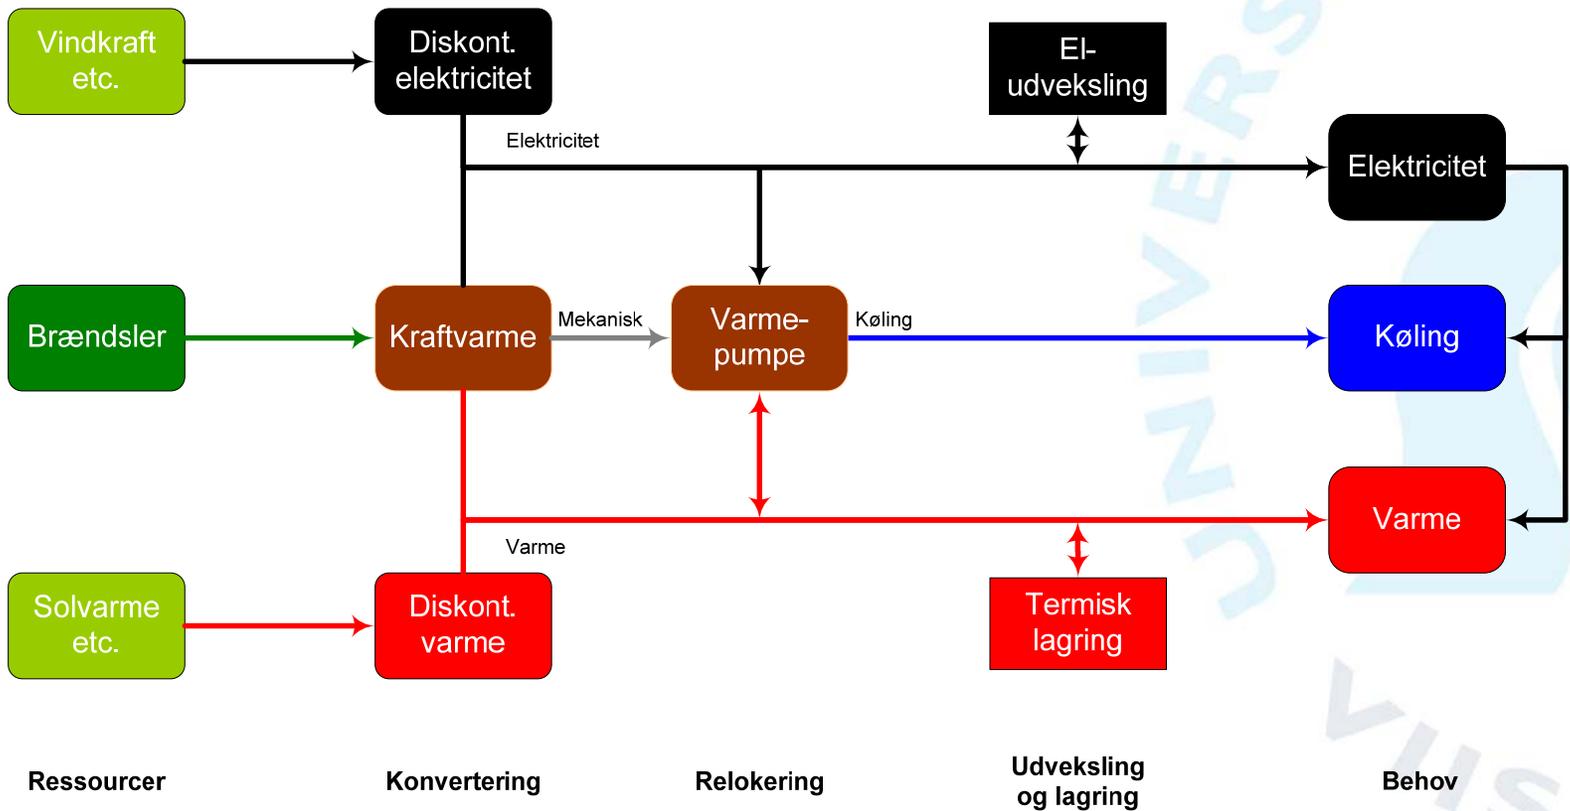

Hvordan kan energisystemet gøres “vindvenligt” ?

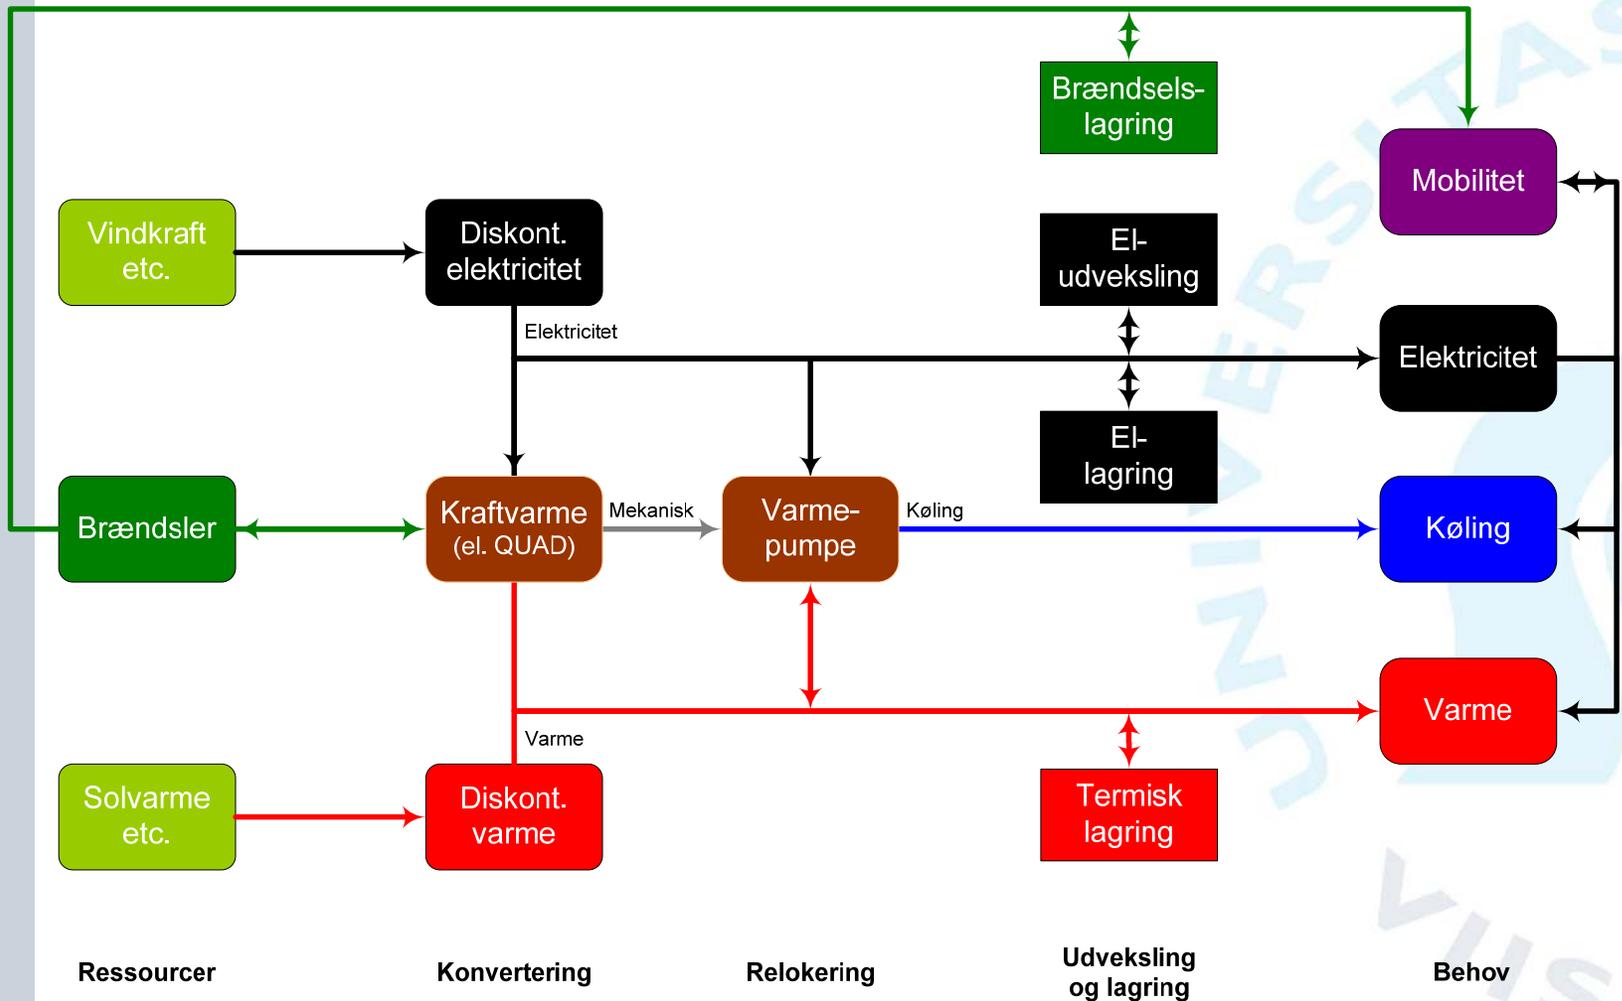

og hvilke konsekvenser for samfund, økonomi og miljø vil det få ?

Det før-bæredygtige energisystem

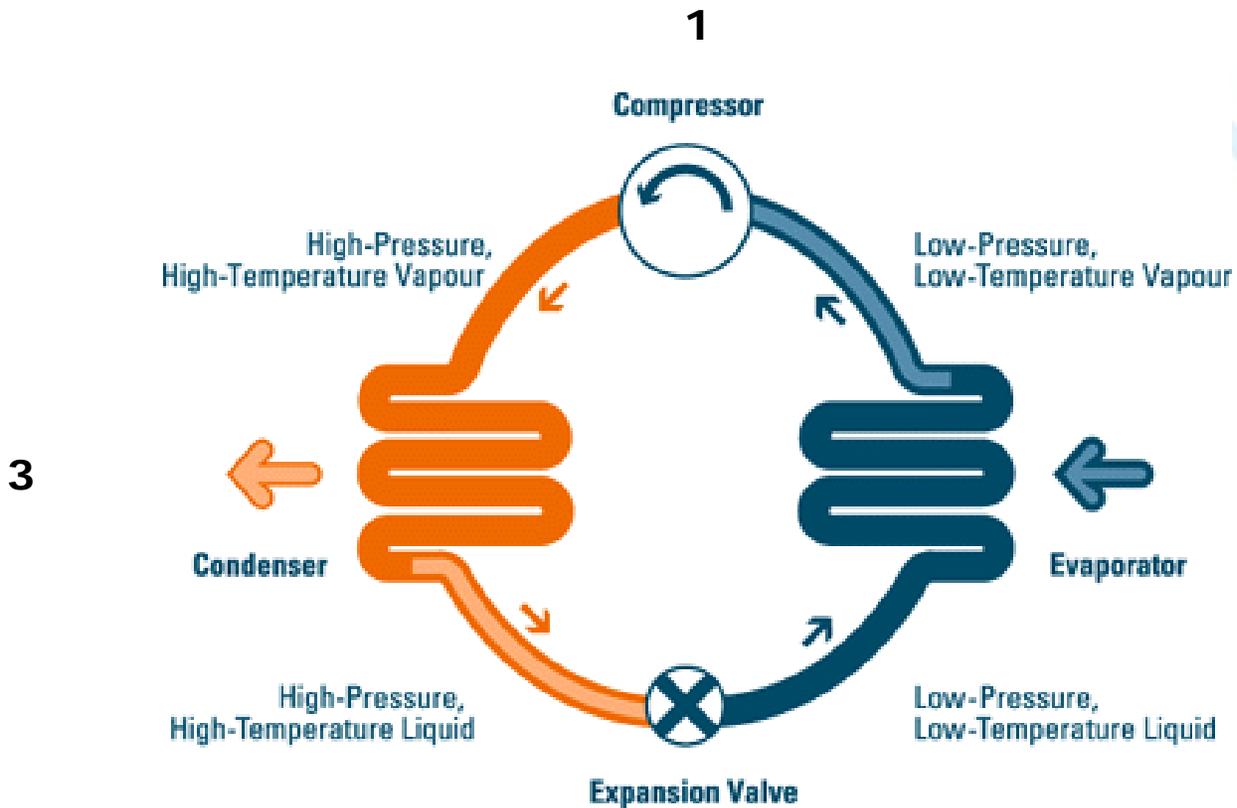

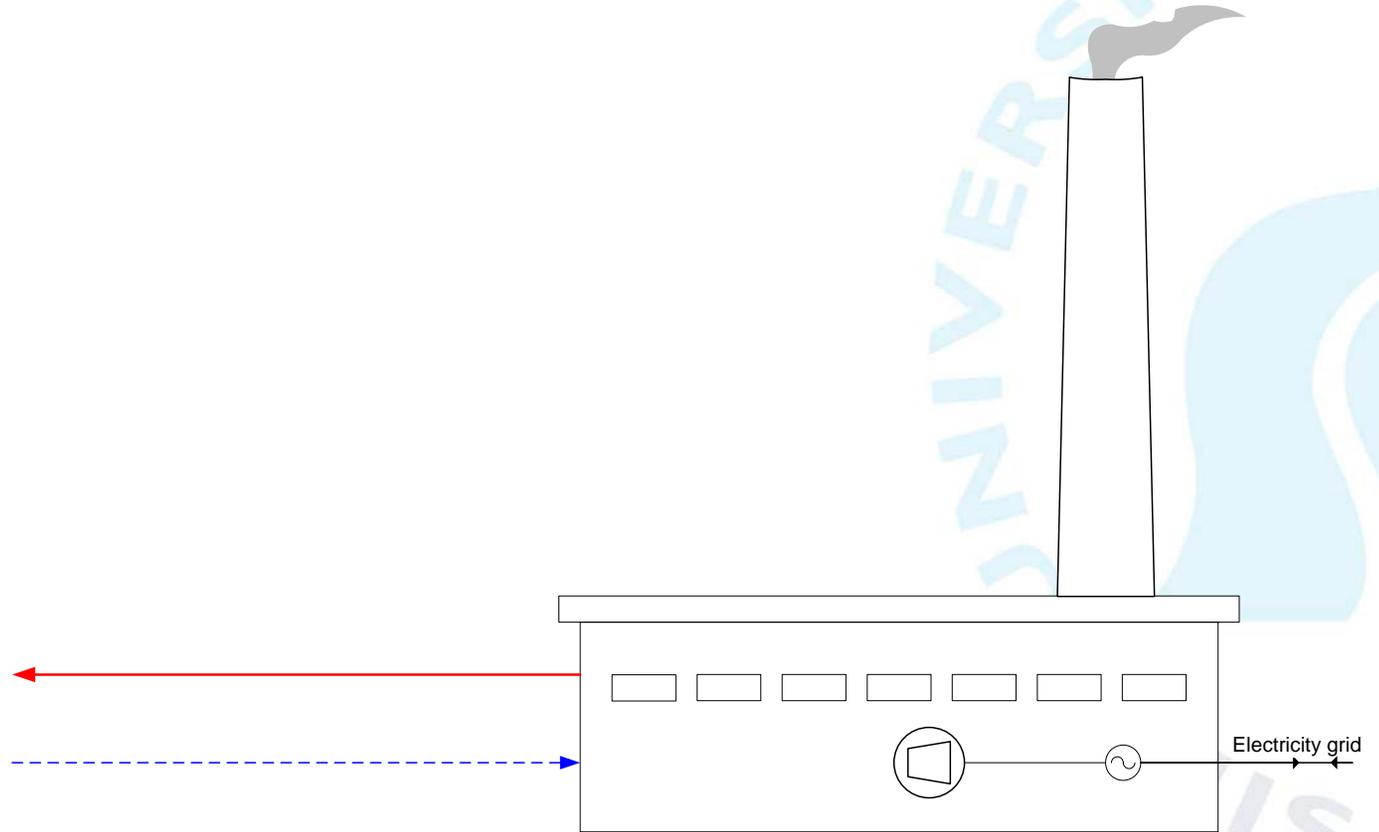

$$2 + 1 = 3$$

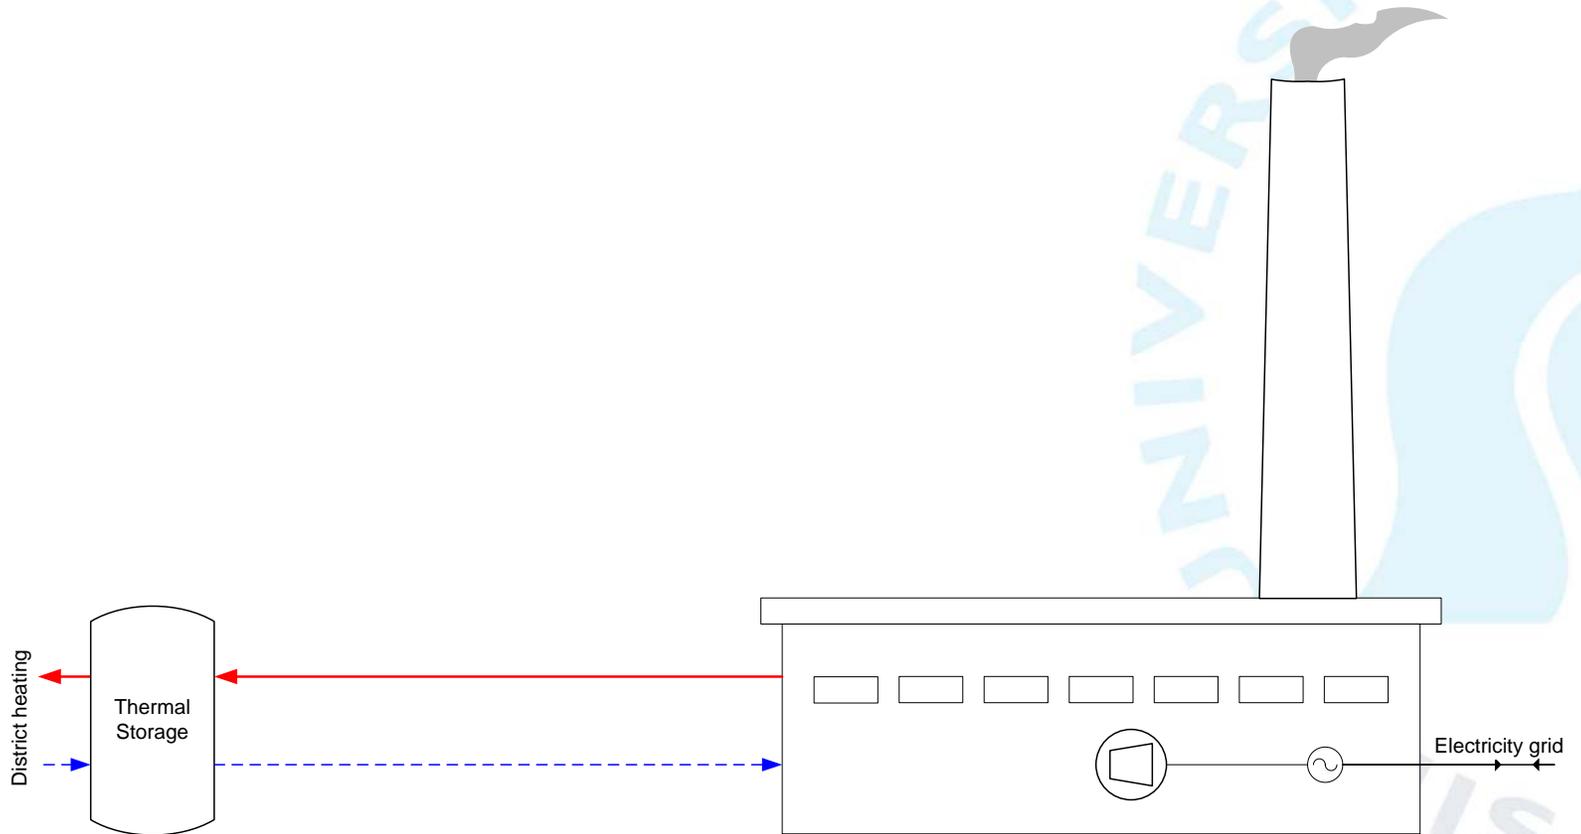

300 % virkningsgrad (COP = 3)

Kraftvarmeanlæg

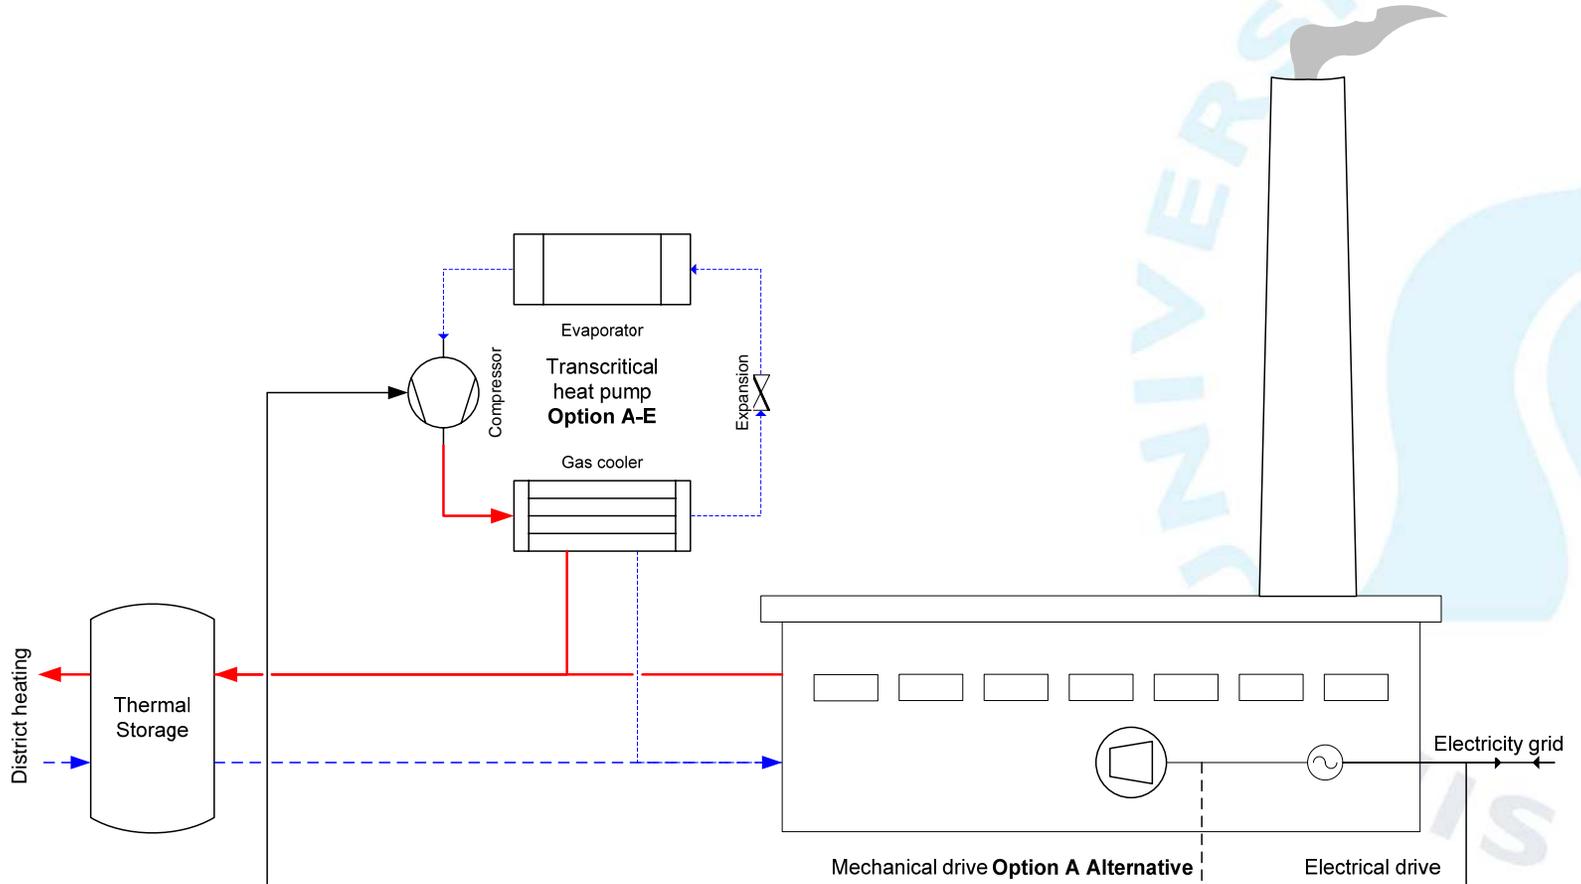

District heating

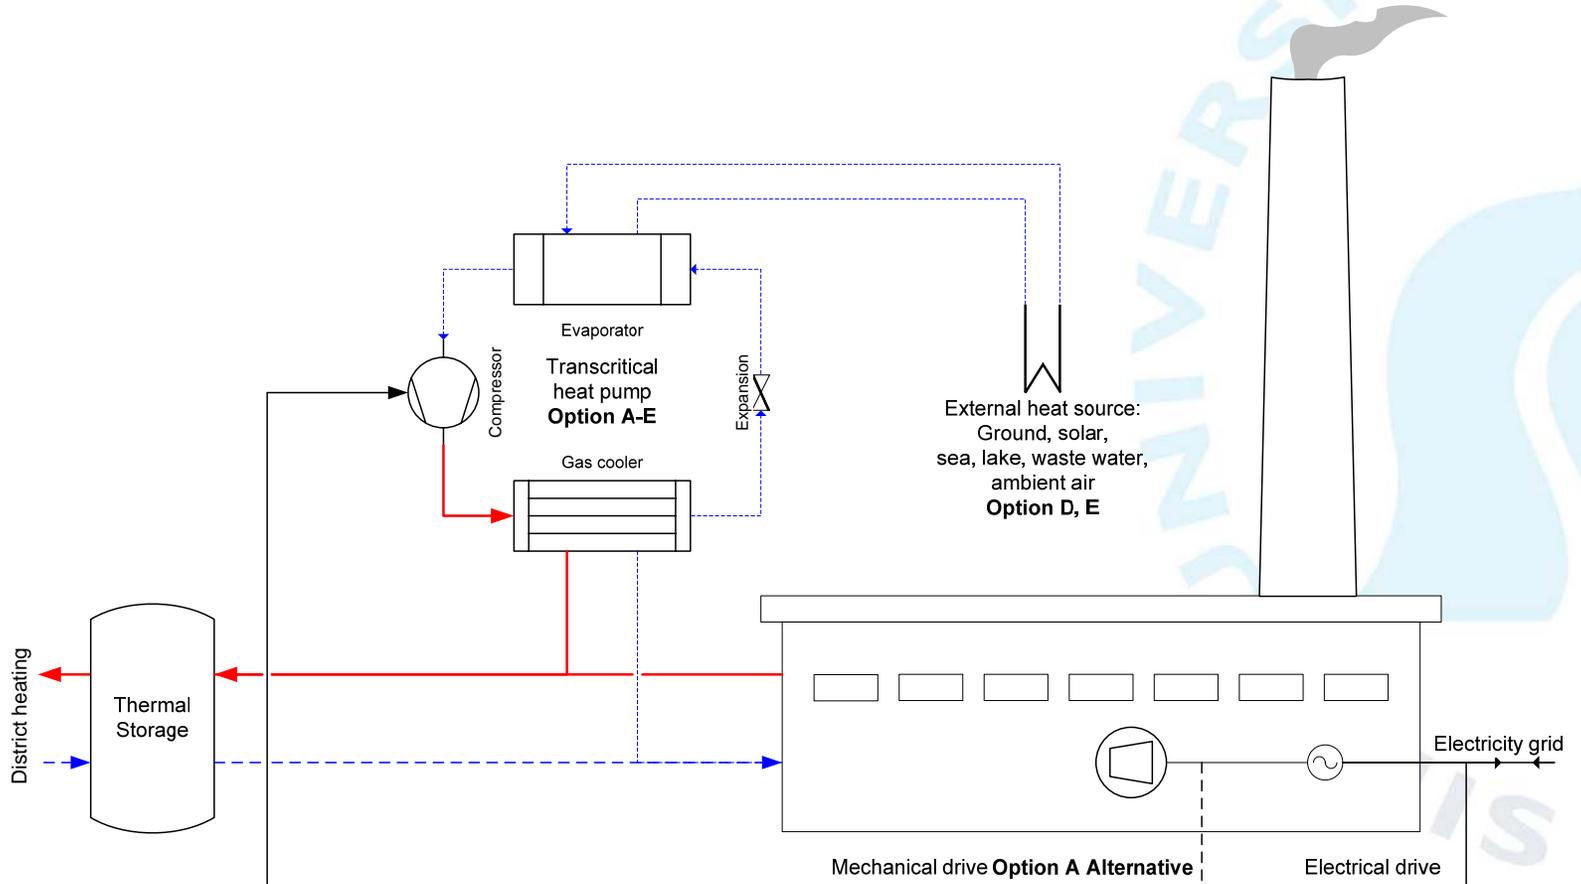

Kraftvarmeanlæg med varmelager

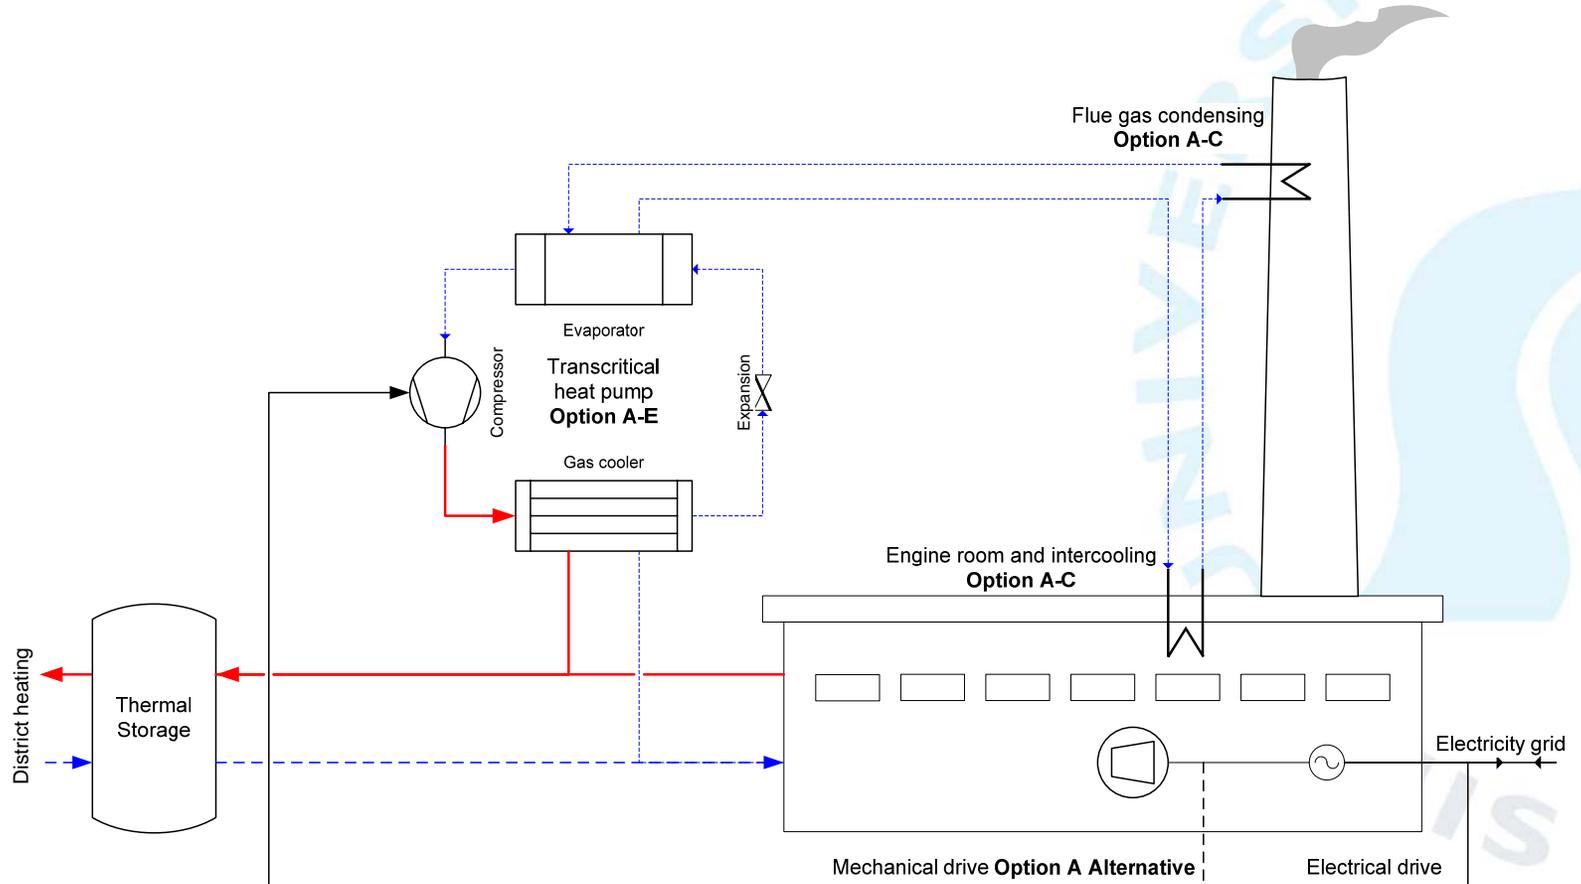

Kraftvarmeanlæg med varmepumpe ?? (Der mangler noget!)

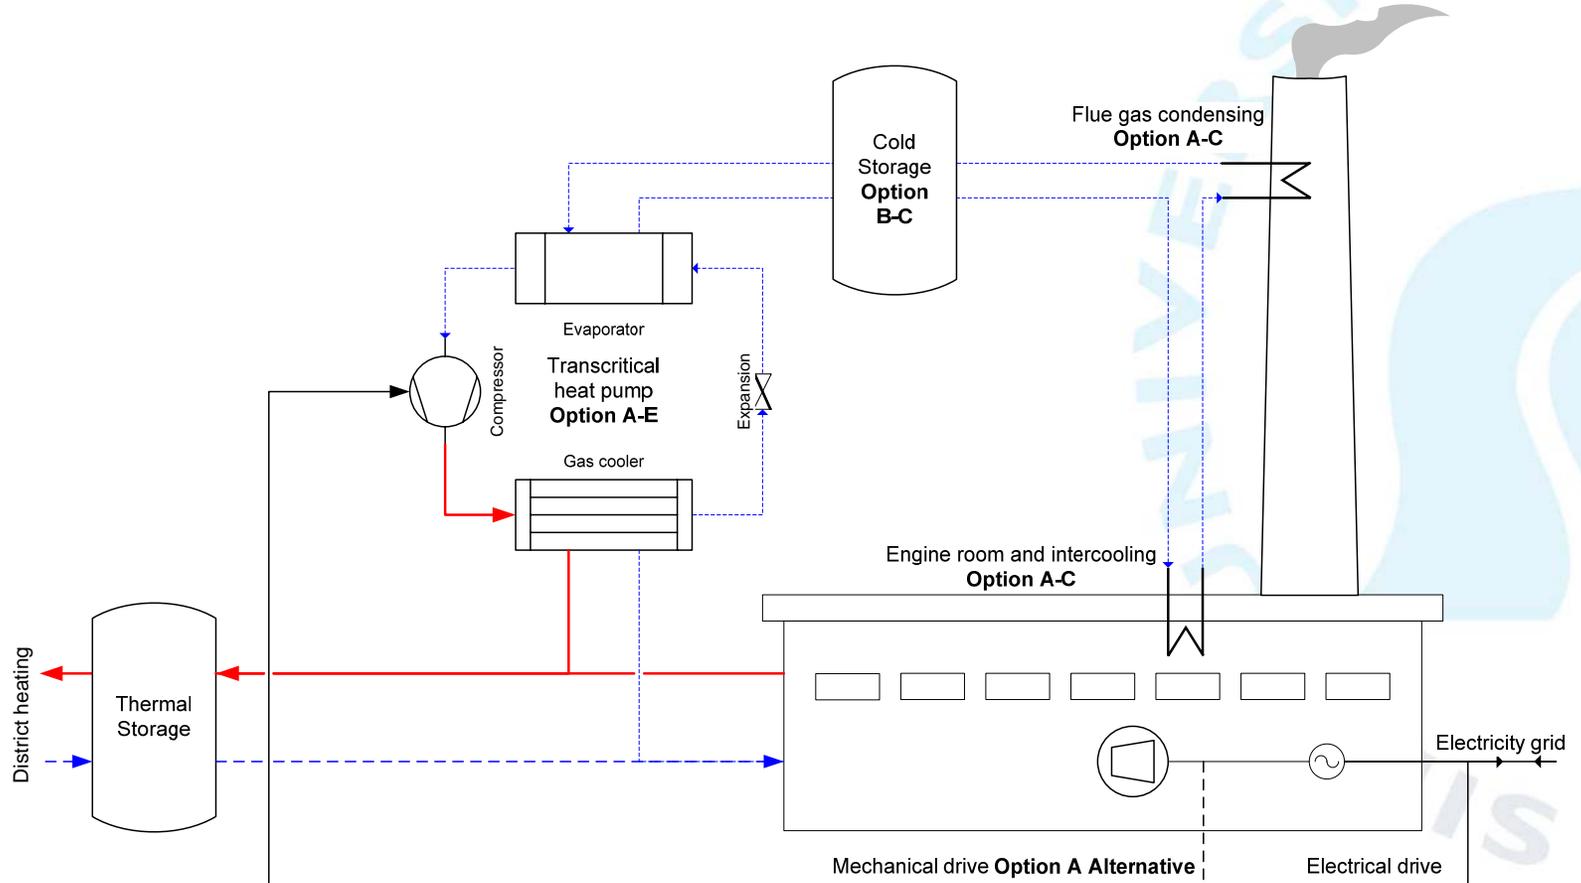

Kraftvarmeanlæg med varmepumpe (f.eks. jordvarme)

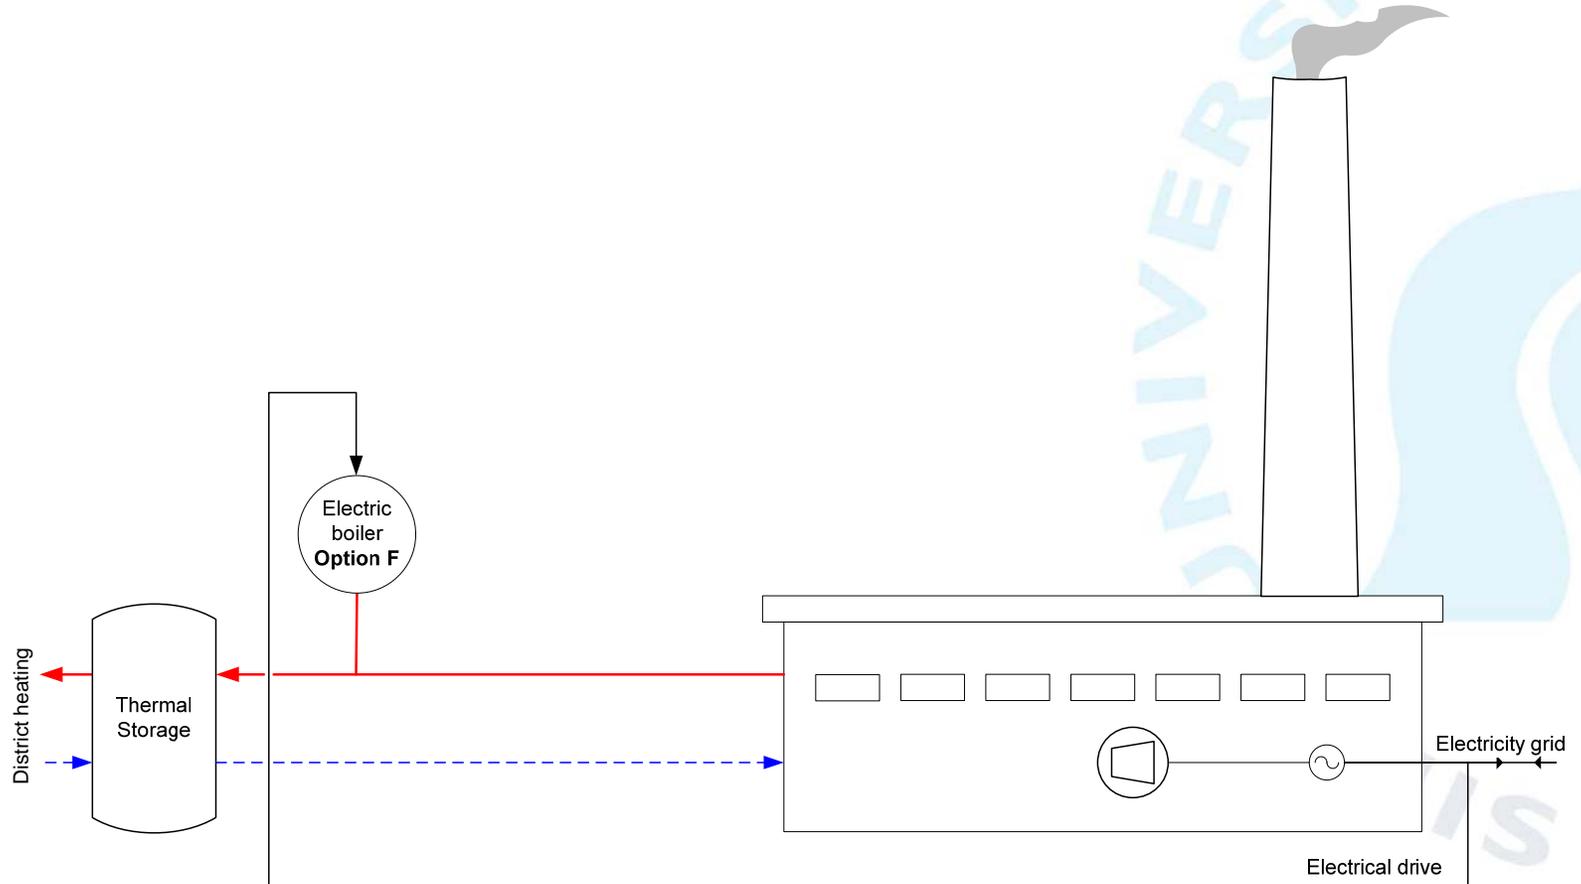

Kraftvarmeanlæg med varmepumpe, hvor afkøling af røggas anvendes som lav-temperatur (integreret) varmekilde

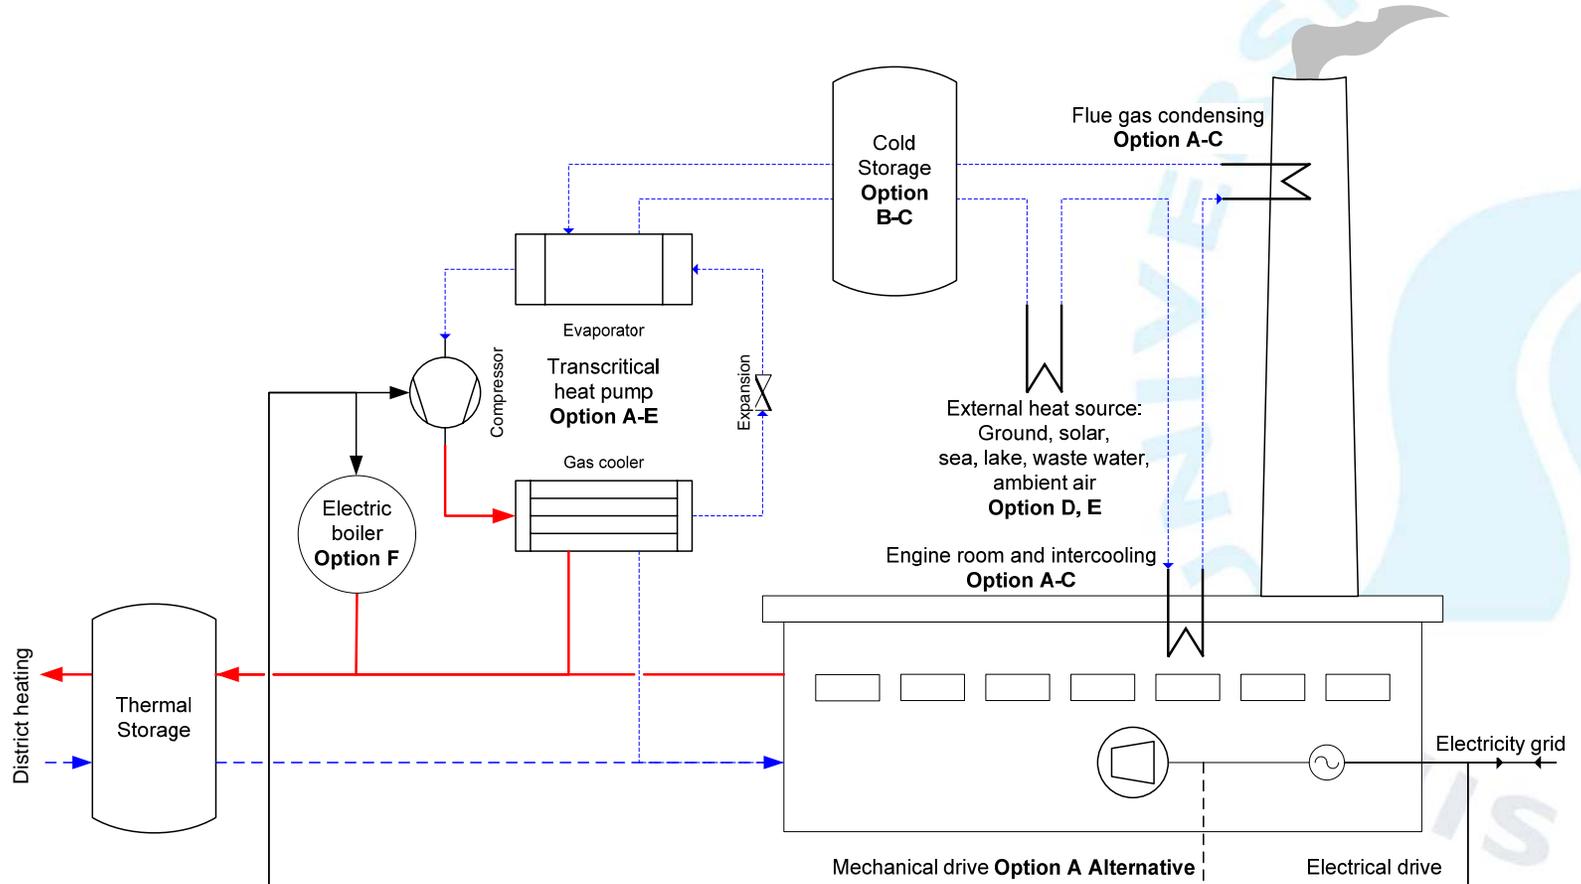

Kraftvarmeanlæg med varmepumpe, røggaskøling og “koldt varmelager”

Kraftvarmeanlæg med elkedel

Fremtidens kraftvarmeanlæg?

Fremtidens køretøj?
